

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A system of network devices for electronic business and access to ~~sources~~ data comprising:

one or more clients;

an enclosed network having a central server, at least one national server, and at least one operator server,

said central server located at the top of said enclosed network configured to keep a list of data on at least one menu structure, said menu structure having at least one master item and at least one slave item configured in a hierarchical manner;

each of said at least one national server coupled to said central server and representing a country or language, said national server configured to maintain said menu structure and transfer said menu structure to said at least one operator server;

each of said at least one operator server coupled to one of said at least one national server and representing a region or state within said country or language, said one or more clients coupled to said enclosed network through said at least one operator server; and

a user interface coupled to said one or more clients between said one or more clients and said enclosed network such that all internal services provided to the client are provided via said user interface.

2. (Original) The system of claim 1, wherein said user interface is a user environment and is created by special means.

3. (Original) The system of claim 2, wherein said special means comprise:
software design;
hardware design; and
organizational means.
4. (Original) The system of claim 1, wherein said coupling between said one or more clients and said enclosed networks is a mediated connection.
5. (Original) The system of claim 2, wherein said coupling between said one or more clients and said enclosed networks is a mediated connection.
6. (Original) The system of claim 3, wherein said coupling between said one or more clients and said enclosed networks is a mediated connection.
7. (Original) The system of claim 1, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.
8. (Original) The system of claim 2, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.

9. (Original) The system of claim 3, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.

10. (Original) The system of claim 4, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.

11. (Original) The system of claim 5, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.

12. (Original) The system of claim 6, wherein said coupling between said one or more clients and said enclosed networks is secure via a software layer having an interface, a security module, and a client security module.

13. (New) The system of claim 1 wherein said menu structure comprises at least one global tree.
